

Using HTML , CSS DEVELOPERS CLUB

MOTIVATION

- **Creative expression + real results**
- **Community & collaboration**
- **Flexibility & freedom**

HTM

HyperText Markup Language (HTML) is the standard markup language for creating web pages. It provides the structure and content, defining how elements are organized. HTML files typically use the .html or .htm extension.

HTML Boilerplate: The Basic Structure

Document Type Declaration

`<!DOCTYPE html>` declares HTML5, ensuring modern rendering

Root Element:-

`<html>` acts as the container for all page content.

Head Section :-

`<head>` holds metadata like the page title, scripts, and stylesheets

Body Section:-

`<body>` contains all visible page content.

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Document</title>
  </head>
  <body>
    .
    .
    .
  </body>
</html>
```

HTML TAGS

Title Tag:- **<title>**

The `<title>` tag defines the text displayed in the browser tab or window title bar. It's crucial for SEO and user recognition.

`<title>My Awesome Website</title>`

Heading Tag:- **<h1>-<h6>**

HTML headings `<h1>` to `<h6>` structure content hierarchically.

`<h1>` is the most important, decreasing in size to `<h6>`.

`<h1>Welcome to My Site</h1>`

Paragraph Tag:-

<p>

The <p> tag creates distinct paragraphs of text. It's the most common tag for body content .

<p>Learn HTML to build websites.</p>

Image Tag:-

The tag embeds images into a web page. It requires src (source URL) and alt (alternative text for accessibility).

Anchor Tag:- <a>

The <a> tag creates hyperlinks, allowing users to navigate to other pages or resources using the href attribute.

Visit Example

Header Tag:- **<header>**

The <header> element typically contains introductory content, like a site title or navigation links.

```
<header>  
  <h1>My Website</h1>  
  <nav>.....</nav>  
</header>
```

Navigation Tag: **<nav>**

The <nav> element is used for primary navigation links, guiding users through the website's main sections.

```
<nav>  
  <a href="/">Home</a>  
  <a  
    href="/about">About</a>  
</nav>
```

CSS (Cascading Style Sheets)

Cascading Style Sheets (CSS) selectors essential for building and styling a website.

CSS is crucial because it separates the content of a web page from its visual presentation, allowing for consistent and efficient design across multiple pages.

We'll cover tag and class selectors, demonstrating their role in structuring and styling web content, enhancing visual appeal, and improving user experience.

section: Thematic Grouping

The section tag groups related content. It helps organize documents into logical thematic sections.

```
section { padding:  
20px; }
```

span: Inline Container

The span tag is an inline container for text. It's used to apply styles to small parts of text.

```
span { font-weight: bold; color:  
blue; }
```

Road Map

Phase 1: Mastering Front-End Web Development

Phase 2: Mastering Back-End Web Development
